

Boom Lift Training Fort McMurray

Boom Lift Training Fort McMurray - Aerial platforms or also known as elevated work platforms are devices that enable workers to perform duties and tasks at elevated heights that will not be otherwise accessible. There are a variety of aerial lifts on the market to carry out various applications under different site conditions. If not carefully operated, elevated work platforms could lead to serious injury or fatality. The most common reasons for related accidents are electrocution, falls, crushed body parts and tip-overs. Lift operators should be trained fully in procedures to avoid accidents while operating lifts.

The Aerial Lift Safety program offers required resources to be able to help individuals needing to learn how to operate these devices more effectively. Through the course, participants will receive thorough instruction. Types of lift covered consist of scissor, articulating and boom supported aerial lifts. The video presents the proper procedures operators must follow. Instruction focuses on pre-operational check, protection against falls, stability of the device and safe driving procedures.

The boom lift training course would help to deal with employee safety and equipment reliability, utilizing materials which are fully compliant with your local and regional requirements and regulations. Course management and training methods will be taught. The trainer would also become well versed in the technical aspects of aerial lift safety.

Both classroom training and practical training are parts of the Aerial Platform/Boom Truck Training course. Both sessions should be successfully completed for the participant to receive a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms totally beyond the base of the machinery. The theoretical training component is almost identical for both kinds. The practical component of the training can be finished faster if just one type of equipment is utilized.

Elevating Work Platform Training Program Objectives:

Aerial Platform/Boom Lift Training provides competency requirements for safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms (for use on paved/slab surfaces). Training will help operators to make more efficient use of elevating work platforms whilst lessening the chances of an expensive workplace accident. Trainees would review of applicable regulations and business policies, discuss Due Diligence, review Criminal Negligence and consequences to employers, trainers, employees and supervisors. Participants will review machine features, stability, operating procedures, fueling/charging procedures and parking. Site-specific safety matters would be dealt with.
