

Crane Operator Certification Fort McMurray

Crane Operator Certification Fort McMurray - The process to enable individuals in order to operate particular kinds of cranes is to take crane operator certification training to be given certification. The certification process comprises classroom learning, hands-on practice and a competency evaluation. Several training programs are offered for overhead cranes, mobile cranes, forklifts, boom trucks, tower cranes and various hoisting machinery. Trainees will learn the basics of equipment characteristics, safety, and operational practices related with these types of cranes.

Customized Practical Training and Evaluation:

Companies can request customized practical training and evaluation on-site at the work facility following the in-class session. Two operators will be trained at a time by an instructor. The length of time needed for training would differ depending on equipment type and the employees' levels of ability, but generally requires an hour or two. The training would concentrate on practical skills like safe operating practices, planning the lift and right rigging practices. Employers must schedule the on-site session in advance.

Following in-class instruction, practical operating instruction and assessment, and written test, the trainee would receive an individual wallet certificate and the company will receive a wall certificate. To be able to get certification, trainees should have an 80 percent passing score on both practical and written exams.

Included in the crane operator certification program is the following: Instruction manuals, regulations and policies; dangers of high voltage; safety issues; signals and communications; emergency rescue procedures; pre-operational inspection; types, components and terms; crane configuration and capacity; pre-lift set-up and planning; wire rope and rigging; hammerhead / luffing jib crane operations; fall protection; climbing cranes; WHMIS; crane maintenance and First aid & CPR.

To be able to become an overhead crane operator, the minimum basics include possessing the mental and physical capability considered necessary to perform crane work. The necessary capabilities which are necessary include depth perception, normal field of vision, reaction time, coordination and manual dexterity. Potential operators should not have the tendency to become lightheaded. Operators who do not already have proof of experience and qualifications must get certification. Operators should be qualified to operate the certain kind of equipment which they would be utilizing to perform their task.
